

CURRICULUM

Master of Engineering / Master of Natural Resources, Renewable Energy

As a professional in the field of renewable energy, you have the skills to develop energy sector companies and organisations as well as being ready to work as an independent expert. You also have perspective on the importance of sustainable development in society. Completion of these studies at the university of applied sciences updates your degree to the master's level.

Degree

Degree Title	Master of Engineering Master of Natural Resources
Extent	60 cr / 1-2 years

Typical Tasks for Graduates

After graduation you are a renewable energy expert who has competences and ability to be in charge of promoting renewable energy utilisation. You recognize the potentials and development needs of renewable energy and are able to use your skills in field-related tasks.

The studies provide you with competences to work in various expert, supervising and tutoring tasks in enterprises, public administration and in the third sector. Your tasks may be connected with supply of renewable energy, heating business, planning and developing activities or teaching in the energy field.

Implementation of Studies

Renewable energy education improves your abilities to work in different positions in companies or organisations of the field. You are also prepared to maintain your capabilities and to develop your expertise continuously. Your studies strengthen a developing and investigative working method. In your studies you strengthen your professional knowledge, learn to understand challenges and potentials connected to the utilisation of renewable energy and to act in a changing environment.

In organising the studies the aim is to take into consideration the time management challenges of mature students and thus the studies are implemented as blended learning, each month consisting of 2-3 contact teaching days. In the beginning of the studies each student will draw up a personal study plan instructed by the head lecturer in charge. You can customise the learning assignments to align with your own strengths and weaknesses and according to your work tasks.

Structure and Content of Studies

Your studies contain a common core (55 credits) and optional studies (5 credits). The objective of the common studies is to deepen the ability to apply theory to the practises of your own organisation or another organisation chosen by you. In addition, the studies develop your analysis, project management, R&D participation and social skills. The common studies contain a thesis (30 credits), which is based on a current work-connected development idea or problem and is implemented in cooperation with work life.

The contents of the studies are: energy business and entrepreneurship, environmental leadership and management, renewable energy technologies and innovation methods.

RENEWABLE ENERGY

Master of Engineering | Master of Natural Resources
60 cr / 1-2 years

Renewable Energy Competence | Sustainable Management Competence | Development Competence | Ethical Competence | Internationalisation Competence | Learning Skills | Innovation Competence | Working Community Competence

2 nd year	RENEWABLE ENERGY EXPERT			
Thesis	10/30 cr	Thesis	15/30 cr	
1 st year	RENEWABLE ENERGY DEVELOPER			
Renewable Energy Technologies	5 cr	Thesis	5/30 cr	
Sustainable Management	5 cr	Optional Studies	5 cr	
Operating Environment in the International Energy Sector	3 cr	Planning and Acquisition of Energy Solutions	5 cr	
		Energy Business and Entrepreneurship	4 cr	
		Innovation Methods	3 cr
